Attached was the information on cabling we provided back in June… for the additional access point, it was a new add the IT folks asked for that was not reflected on our original response, but was in our comments from last week.

Danny,

Please let us know what information you want us to incorporate into the CDs. Can you please provide FERC's low voltage requirements/specifications so cabling vendors will be able to provide their proposal through Akridge/CIM?

Also, please note that the power and signal plans in the permit set were put together based on the attached power and data requirements provided by FERC.

Thanks,
Kaan

Andrea,
Apologies for the confusion. The attached file in my reviews submission is the GSA's comment. But the body of the email I have forwarded after me email was FERC's comment. It looks like you have addressed all of GSA's comment, but not FERC's.

Please refer to the email I have forwarded where Josh has 2 comments:
1. Additional wireless Access point (there's also a drawing embeded in the email showing this location)
2. low voltage cabling has to be included in the GC scope

We're adding 1 more FERC's comment, i.e. inclusion of signage.

Please let me know if there's any questions.

Thanks

Thanks Josh.

Patric/Kaan,
Atttached is GSA's comments.

Please respond to FERC's and GSA Comments. Advise us on the timing of the Issuance of the CD's for final approval. Upon Govt's final approval, we will proceed with permit and pricing.

Thanks,

Subject: FERC Swing: Status of Design Review

Good morning Josh,
I would like to check the status of the Design Review for the 100%CD's FERC Swing.

Thanks
